EDUCATION

- **Chulalongkorn University** – B.Eng. Computer Engineering, 2025 – present | Expected 2029 GPA: 3.63

AWARDS

1st Place - The 19th Thailand Olympiad in Informatics (TOI19), 2023

- National competition in algorithms and programming among high school students.

SKILLS

- Languages: Go, Java, Python, C++, TypeScript
- Libraries / Frameworks: React.js, Next.js, Tailwind, Express, Spring Boot, Socket.IO
- Databases: PostgreSQL, MongoDB
- Tools / Services: Git, Docker, AWS, RabbitMQ

EXPERIENCES

4Plus Consulting Co., Ltd. Aug. 2026 – Present

Fullstack Developer (Part-time)

- Built the competency system for a multi-tenant AI knowledge management platform, including a skill catalog and proficiency scale, individual skill levels, role requirements, and links from knowledge-base documents to the skills they teach.

4Plus Consulting Co., Ltd. Jun. 2026 – Jul. 2026

Fullstack Developer Internship

- Built the full-stack AI water-management web application, collaborating with the data engineering team, owning the React/Express UI and API, designing operational dashboards and water network diagram, implementing auth, RBAC, and data ingestion workflows, and working directly with the client to gather requirements and feedback.
- Contributed to a multi-tenant AI knowledge full-stack development, designed the database schema and sync flow for multi-provider cloud-drive integration, optimized document-processing costs for Google Vision OCR.

FECamp19 Oct. 2025 – May 2026

Senior Backend

- Design and built the backend of a learning management system using Java and Spring Boot, including RESTful APIs, role-based access control, and course management, for a platform used by approximately 500 users.
- Delivered classroom announcements, document uploads, attendance tracking, pre-test and post-test scoring and statistics, and a subject Q&A module.

BUU POSN Camp Oct. 2023 – Present

Teaching Assistant

- Instructed high school students from Eastern Thailand in data structures and algorithms.
- Designed competitive programming problems and comprehensive test cases for contestant selection.

PROJECTS

- **Graph Rag Service** – Built a Graph RAG backend in Go that chunks documents, extracts entities with an LLM, and stores embeddings in Memgraph. Questions are answered by cosine vector search plus graph hops. User, Knowledge, and Conversation services follow domain-driven design, CQRS, and clean architecture, with JWT auth and gRPC.
- **SpellCam** – Led a 3-member team to develop a WebRTC application with user authentication, Socket.IO signaling, and MediaPipe-based hand tracking, synchronizing gesture data and media streams through WebRTC data channels.
- **Go Chat Backend** – Built a modular-monolith chat backend in Go with RESTful, gRPC, WebSocket APIs, and integrated RabbitMQ for async event handling and real-time messaging.
- **Clean Go User Service** – Built a Go authentication service using clean architecture, implementing Google OAuth2 login and sign-up with rotating access and refresh token flows. Exposed RESTful APIs with Gorilla Mux and integrated PostgreSQL and Redis for persistent and session data.
